

Energizer Holdings, Inc.
Conflict Minerals Report
For the Reporting Period from January 1, 2017 to December 31, 2017

This report for the reporting period from January 1, 2017 to December 31, 2017 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the "Rule"). The Rule was adopted by the Securities and Exchange Commission ("SEC") to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 ("Dodd-Frank Act"). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals which are necessary to the functionality or production of their products. "Conflict minerals" are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are limited to metallic forms of tin, tantalum, tungsten, and gold (3TG). These requirements apply to registrants regardless of the geographic origin of the conflict minerals and whether or not they fund armed conflict.

If a registrant can establish that the conflict minerals originated from sources other than the Democratic Republic of the Congo or an adjoining country (the "Covered Countries"), or from recycled and scrap sources, they must submit a Form SD which describes the Reasonable Country of Origin Inquiry completed.

If a registrant has reason to believe that any of the conflict minerals in their supply chain may have originated in the Covered Countries, or if they are unable to determine the country of origin of those conflict minerals, then the registrant must exercise due diligence on the conflict minerals' source and chain of custody. The registrant must annually submit a report, Conflict Minerals Report ("CMR"), to the SEC that includes a description of those due diligence measures.

Company Overview

This report has been prepared by management of Energizer Holdings, Inc. (herein referred to as "Energizer," the "Company," "we," or "us"). The information includes the activities of all majority-owned subsidiaries and variable interest entities that are required to be consolidated. It does not include the activities of variable interest entities that are not required to be consolidated.

Energizer, headquartered in St. Louis, MO, is one of the world's largest manufacturers of primary batteries and portable lighting products, anchored by its two globally recognized brands Energizer® and EVEREADY®. Energizer is also a leading designer and marketer of automotive fragrance and appearance products from recognized brands such as Refresh Your Car!®, California Scents®, Driven®, Bahama & Co.®, LEXOL®, and Eagle One®.

The Company identified conflict minerals contained in products: (i) for which conflict minerals are necessary to the functionality or production of those products; (ii) that were manufactured, or contracted to be manufactured by us; and (iii) for which the manufacture was completed during calendar year 2017; and (iv) with respect to conflict minerals in such products, for which we were unable to reasonably determine that all of the conflict minerals contained therein did not originate in the Covered Countries (or did come from recycled or scrap sources) (the "Products"). We believe that conflict minerals are present in the following products: round cell alkaline batteries, round cell carbon zinc batteries, lighting, and chargers.

Conflict Minerals Policy

We have adopted a conflict minerals policy which expresses Energizer's goal to ensure all 3TG minerals used in our products are "DRC conflict free". Our policy is publicly available on our website at <http://www.energizerholdings.com/company/supplier-relations>. The website and information accessible through it are not incorporated into this document.

Supply Chain

A number of Energizer's products contain advanced components and compounds manufactured by our suppliers.

These suppliers may manufacture the components themselves or source some or all of the production to their suppliers. These suppliers may do the same with lower tier suppliers. We rely on our direct suppliers to provide information on the origin of the 3TG contained in components and materials supplied to us — including sources of 3TG that are supplied to them from lower tier suppliers. Contracts with our suppliers are frequently in force for three to five years or more and we cannot unilaterally impose new contract terms or flow-down requirements. As we enter into new contracts, or our contracts renew, we have sought to include a clause under which our suppliers undertake that no 3TG that originated in the Covered Countries are incorporated in, or necessary to, the functionality or production of any product delivered to us, including in any component manufactured of such product by a third party.

Under the terms of these contracts, it will take a number of years to ensure that all our supplier contracts contain appropriate clauses. In the meantime, as described below, we are working with our suppliers to obtain the 3TG sourcing information.

Due to the size of our supply base, it is not practicable to conduct a survey of all our suppliers and we believed a reasonable approach would be to conduct a survey of the suppliers who provided raw materials for products containing 3TG in relevant product supply chains as well as sourced product suppliers in 2017. We assessed our industry as well as others and concluded that this risk-based approach is consistent with how many peer companies are approaching the Rule. We have also implemented software designed to facilitate and track our supplier surveys.

Because of our size, the complexity of our products, and the depth, breadth, and constant evolution of our supply chain, it is difficult to identify actors upstream from our direct suppliers. As we do not typically have a direct relationship with 3TG smelters and refiners, we are engaged and actively cooperate with other major manufacturers in our sector and other sectors. Accordingly we participate in a number of industry-wide initiatives, including the Responsible Minerals Initiative (RMI), an industry-wide initiative supporting upstream actors in the supply chain.

Reasonable Country of Origin Inquiry (RCOI) Results

We conducted RCOI surveys as described under "Supply Chain" above. We rely on suppliers, whose components contain 3TG, to disclose the origin of any 3TG used in their manufacturing processes and to identify the 3TG processing facilities within their supply chain. Our direct suppliers are similarly reliant upon information provided by lower tier suppliers. We reviewed the responses that we received against criteria developed to determine which required further engagement with our suppliers. These criteria included untimely or incomplete responses as well as inconsistencies within the data reported in the template. We have worked directly with suppliers to provide revised responses.

The large majority of the responses received provided data at a company or divisional level or, as described above, were unable to specify the smelters or refiners used or countries of origin for components supplied to Energizer. We are therefore unable to determine whether any of the conflict minerals reported by the suppliers were contained in components or parts supplied to us or to validate that any of these smelters or refiners are actually in our supply chain.

Design of Due Diligence Framework

Our due diligence framework was designed to conform, in material respects, with the framework in the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (the "OECD Guidance") and the related Supplements for 3TG.

Due Diligence Measures Performed

Due diligence measures we performed include, but are not limited to:

- Communicating our policy on conflict minerals to direct suppliers;
- Communicating the commitments and requirements expected of our direct suppliers, supported by, when appropriate, email and phone dialogues;

- Determining whether smelter and refiner names were included on the Responsible Minerals Initiative’s Conformant Smelter Report (“CSR”). The CSR is generally understood to contain the names of smelters and the associated risk level of their mineral sourcing;
- Supporting third party audits of 3TG smelters and refiners through our participation in the RMI;
- Approving a risk management plan, through which the material risks to the company related to the conflict minerals program are managed and monitored; and
- Providing updates to senior management and the Audit Committee of the Board of Directors.

Due Diligence Results

Through our participation in RMI and requesting our suppliers to complete the Conflict Minerals Reporting Template (CMRT), we have determined that seeking information about 3TG smelters and refiners in our supply chain represents the most reasonable effort we can make to determine the mines or locations of origin of the 3TG in our supply chain. We have identified approximately 196 smelters and refiners included in our suppliers’ supply chains. Nonetheless, most of our supplier responses were provided at a company level. Many suppliers did not provide verifiable smelter or processing information or responded at a company-wide level which did not allow us to conclude that the conflict minerals were processed by any one particular facility. Based on the information provided by our suppliers, we could not identify how many of these smelters produced materials specifically used in Energizer Products. Therefore, it is possible that none of the materials from these smelters actually entered our supply chain. The list of smelters and refiners and the identified countries of origin are included as Appendix A.

Accordingly, Energizer believes it is reasonable to conclude that the Covered Products are “DRC conflict undeterminable,” as defined in the Rule.

Steps to be taken to mitigate risk

We intend to take the following steps to improve the due diligence conducted to further mitigate risk that the necessary conflict minerals in our Products could benefit armed groups in the DRC or adjoining countries:

- Continue to incorporate a conflict minerals flow-down clause in new or renewed supplier contracts;
- Engage with suppliers and direct them to training resources to attempt to increase the response rate and improve the content of the supplier survey responses;
- Engage any of our suppliers found to be supplying us with 3TG from sources that support conflict in the DRC or any adjoining country to establish an alternative source of 3TG that does not support such conflict; and
- Work with relevant trade associations to define and improve best practices and build leverage over the supply chain in accordance with the OECD Guidance.

Appendix A – List of Smelters/Refiners and Identified Countries of Origin

Based on the information that was provided by the Covered Suppliers and otherwise obtained through the due diligence process, the Company believes that, to the extent reasonably determinable by the Company, the facilities that were used to process the Conflict Minerals contained in the Covered Products included the smelters and refiners listed below. We are unable to definitively link the identified smelters and refiners to only those products and materials in our supply chain; therefore our smelter and refiner list likely contains more processing facilities than are actually in our supply chain and used to manufacture the Covered Products.

Based on the information obtained pursuant to the due diligence process, the Company does not have sufficient information to conclusively determine the country of origin of all of the Conflict Minerals in the Covered Products. At the same time, we received no information from our Covered Suppliers indicating that the tin, tantalum, tungsten or gold in our Covered Products directly or indirectly financed or benefitted armed groups in the Covered Countries. Also, due to the manner in which our Covered Suppliers disclosed country of origin information, we do not believe that all of the countries named are actually in our supply chain or Covered Products. However, based on the information that has been obtained, the Company has reasonably determined that the Conflict Minerals may have originated from the countries listed in the table below.

Based on the information obtained pursuant to the due diligence process, the Company believes there is a risk that the Covered Products may contain Conflict Minerals from the Covered Countries. The Company's due diligence into the supply chain was unable to determine whether any of the Covered Products did or did not contain any Conflict Minerals from any Covered Country, as defined in the Rule.
